

Recommended For Complete Web Development Course

What is Frontend development?

Everything you see on a website, like buttons, links, animations, and more, were created by a front end web developer. It is the front end developer's job to take the vision and design concept from the client and implement it through code.

How to become a Frontend developer?

- Start with learning HTML, CSS and a CSS framework (Tailwind, Bootstrap, etc); don't wait to fully master these and start **building simple projects as soon as possible**. Do as many of these projects as possible as you keep learning.
- Once you are somewhat comfortable with HTML and CSS, start learning some basic JavaScript and learn how to add interactivity to your websites. While you are at it learn some basics of Git and GitHub.
- Then learn to implement a libraries/frameworks (React, Nextjs, etc)
