

Recommended For Complete Web Development Course

The video player shows a lesson titled "What is Backend development?". The video content includes a definition of back-end development, a section on how to become a backend developer, and a list of topics to learn. The video player has a progress bar at 13:12 / 19:00 and a reference link to "Coursera, Roadmap". The video player interface includes a feedback button, a bookmark button, and a "Next" button.

What is Backend development?

Back-end development means working on server-side software, which focuses on everything you can't see on a website. Back-end developers ensure the website performs correctly, focusing on databases, back-end logic, application programming interface (APIs), architecture, and servers.

How to become a Backend developer?

If you are a complete beginner who is just getting started, you can start by learning a backend programming language such as JavaScript, Python, etc.

Once you have got the basic to intermediate understanding of the language, learn about the package manager for that language and learn how to install and use external packages into your applications.

Learn the basics of database e.g. MongoDB and learn how to run simple CRUD operations. You can pick up and learn a framework (Express).
